Project Overview

EduGenie is a web-based AI learning assistant. A learner selects one of five tools, provides a question/topic/passage, and receives a focused response generated through a shared AI service. The design keeps the user interface simple while separating each learning workflow into its own Python module.

Core solution components

- FastAPI backend exposes REST endpoints and validates inputs.
- Five feature modules create task-specific prompts.
- AIService centralizes Gemini configuration and provides a demo fallback.
- The browser UI displays normal text responses and interactive quiz questions.
- Environment variables protect API credentials from source code.

Expected user outcome

A learner can move from uncertainty → explanation → summary → practice → next-step learning without leaving the EduGenie workspace.
