

Project Preparation Notes

Date	30 September 2026	Team ID	6ab3e57da238dc999eb3d44d
Project Name	EduGenie – AI-Powered Learning Assistant	Maximum Marks	As per template

Team Members: Benita Genesis I, Ricardo Dominic Victor, Nivetha E, Bhuvaneshwaran

GitHub: <https://github.com/ricardovictor-28507/Google-Cloud-Generative-AI--A-S>

Prerequisites

- Python 3.10+
- FastAPI / Uvicorn
- Jinja2
- Google Gemini API access for live mode
- VS Code or equivalent IDE

Implementation workflow

- Select a learner-focused problem: fragmented study support.
- Build modular FastAPI endpoints for five learning workflows.
- Centralize Gemini integration in AIService.
- Create a simple browser interface with tool tabs.
- Add validation, quiz JSON parsing and demo fallback.
- Verify the application locally and prepare submission documentation.

Current implementation note

The current source code, rather than the older planning notes, is the authoritative description of the implemented AI integration. The project uses the configured Gemini model through the `google-genai` SDK and a deterministic local fallback when a live key is not configured.
